SPECIFICATION SHEET

TITLE: Hardened Serial Server RS-232/422/485 Serial-to-Ethernet PART NO.

TS H MEI

Overview

PortServer TS H MEI is designed for utility plants, pipelines, traffic management facilities, and other remote applications requiring a hardened serial-to-Ethernet solution that can withstand extreme temperatures. It is ideal for networkenabling and remotely managing variable message signs, loop detectors, ramp meters or any RS-232/422/485 serial device.

Digi's patented RealPort*, with encryption and user authentication*, makes it possible to establish a connection between the host and networked serial device by creating a local COM or TTY port on the host computer, allowing software applications to work with networked device servers instead of requiring a host adapter.

PortServer TS H MEI also delivers data security via SSHv2, port buffering, full SNMP device management and industry leading low latency.
